OVERVIEW

This audit has been prepared for 'GROK' to review the main aspects of the project to help investors make an informative decision during their research process

You will find a summarized review of the following **key points**:

Contract's source code

Owner wallets

Tokenomics

Team transparency and goals

Website's age, code, security and UX

Whitepaper and roadmap

Social media and online presence

Table of Content

1 General Info

General Analysis

Audit Review Process

- 1 Testing the smart contracts against both common and uncommon vulnerabilities
- 2 Assessing the codebase to ensure compliance with current best practices and industry standards
- 3 Ensuring contract logic meets the specifications and intentions of the client
- 4 Cross referencing contract structure and implementation against similar smart contracts produced by industry leaders
- 5 Thorough line-by-line AI review of the entire codebase by industry

Detail Analysis

Threat Level

● High

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment

● Medium

Issues on this level are critical to the smart contract's performance/functionality and should be fixed before moving to a live environment

● Low

Issues on this level are minor details and warnings that can remain unfixed

● Informational

Informational level is to offer suggestions for improvement of efficacy or security for features with risk-free factors

Threat Level

● High

1 threats found

● Medium

0 threats found

● Low

0 threats found

● Informational

0 threats found

Detail Analysis

Vulnerability Check

20 Passed

1 Fail

Arbitrary Jump/Storage Write

Centralization of Control

Compiler Issues

Delegate Call to Untrusted Contract

Dependence on Predictable Variables

Ether/Token Theft

Flash Loans

Front Running

Improper Events

Improper Authorization Scheme

Integer Over/Underflow

Logical Issues

Oracle Issues

Outdated Compiler Version

Race Conditions

Reentrancy

Signature Issues

Sybil Attack

Unbounded Loops

Unused Code

Overall Contract Safety

Detail Analysis

Detail Analysis

20 Passed

1 Fail

CATEGORY	STATUS	NOTES
Arbitrary Jump/Storage Write		The contract does not exhibit arbitrary jumps or storage writes, as it adheres to standard Solidity development patterns.
Centralization of Control		No risk of centralization as the contract owner is a dead address, ensuring no single point of control.
Compiler Issues		Compiled with a recent Solidity version (0.8.20) with no known compiler issues.
Delegate Call to Untrusted Contract		There is no use of delegatecall to an untrusted contract, mitigating risks associated with delegate calls.
Dependence on Predictable Variables		The contract does not rely on variables like block.timestamp or block.number in a way that affects core functionalities or security.

Detail Analysis

Detail Analysis

20 Passed

1 Fail

CATEGORY	STATUS	NOTES
Ether/Token Theft		No functions are present that directly transfer Ether or tokens to arbitrary addresses in an unauthorized manner.
Flash Loans		The contract does not interact with flash loan functions, making it unaffected by flash loan attacks.
Front Running		The contract may be susceptible to front-running, as there is no mechanism to prevent it, such as using a commit-reveal scheme.
Improper Events		All critical functions emit events correctly, providing transparency and traceability.
Improper Authorization Scheme		Since the owner is a dead address, there is no risk of an improper authorization scheme.
Integer Over/Underflow		The contract uses SafeMath library for all arithmetic operations, mitigating risks of overflows and underflows.

Detail Analysis

Detail Analysis

20 Passed

1 Fail

CATEGORY	STATUS	NOTES
Logical Issues		No apparent logical issues or inconsistencies in the contract logic.
Oracle Issues		The contract does not interact with oracles, thus not exposing it to oracle-related risks.
Outdated Compiler Version		The contract uses a recent Solidity compiler version (0.8.20), which is not outdated.
Race Conditions		No functions or patterns were found that could lead to race conditions.
Reentrancy		The contract's functions are structured in a way that avoids reentrancy vulnerabilities.
Signature Issues		The contract does not rely on external signatures, hence is not exposed to signature-related risks.

Detail Analysis

Detail Analysis

20 Passed

1 Fail

CATEGORY	STATUS	NOTES
Sybil Attack	<div></div>	The nature of the contract does not make it susceptible to Sybil attacks.
Unbounded Loops	<div></div>	All loops in the contract have bounded conditions, avoiding risks of gas limit issues or denial-of-service.
Unused Code	<div></div>	The contract's code does not contain redundant or unused code, ensuring efficiency and reducing attack surface.
Overall Contract Safety	<div></div>	The contract follows general best practices and does not exhibit critical vulnerabilities, though improvements are suggested in authorization schemes.
